

## SEBIA – World leader in biomedical diagnostics

### Mass Spectrometry Expert (W/M)

One of the world's leaders in the field of clinical diagnostics using separative technologies is creating an innovative clinical research division, as a spin off structure. This new project is based on application of Bottom-up Proteomics allowing highly sensitive detection of cancer proteins, for therapeutic innovation or treatment follow-up.

The Mass Spectrometry expert will continuously improve the technology and manage collaboration with prestigious universities, hospitals and pharma companies.

Based in France (South of Paris), Genopole, Evry(91).

Some travels to the Netherlands might be needed.

He/she will report to the General Manager Innovative Solutions.

#### Main missions

- Perform technology development activities, validation and application to clinical diagnostics
- Design and execute experiments, analyze data and present results
- Manage collaboration with prestigious research and clinical departments in European universities and hospitals
- Maintain a strong awareness of scientific and technical literature relevant to expertise
- Manage collaborations and services for pharma companies, participate in client meetings offering technical support when required.
- Suggest new innovative solutions to routine and complex problems

#### Experience/Education

- PhD and post-doctoral experience in proteomics
- At least 3 years of experience in Mass Spectrometry
- Strong experience in using software for proteomics, Mass Spectrometry and bio-informatics
- Previous experience of clinical collaboration ideally

### Personal skills

- Flexibility, thoroughness, good organization skills
- Excellent communication skills, oral and written
- English language is mandatory
- Ability to cooperate with co-workers, contribute to team spirit and good interpersonal skills

**Contract Type** : Permanent position, to be filled as soon as possible

**Compensation**: Attractive package
